

ABSTRACT

A portable radar system includes a radar sensor coupled to a radar display. The radar sensor and radar display can be portably mounted to a vehicle. The radar system provides a portably mounted radar transceiver with an integral or separately portably mounted visual display and optionally an integral or separately portably mounted audible alert device. The portable radar system can be mounted to the interior of side windows of the vehicle or to any other interior or exterior surface of the vehicle through which radar energy can effectively propagate.
